DANGER

CONSIDERABLE

→ **Stable** Snowpack stable across monitoring stations

BOTTOM LINE

Avoid steep wind-loaded slopes; fresh snow is easily triggered and injuries are severe.

 **DANGER**

 MORE

... but not all good builders

The Adoption Valley

Why New Technology Initially Decreases Productivity

Mental model by Gennaro Cuofano

Historical Examples:

- PCs as "fancy typewriters"
- Internet as "digital brochures"
- Mobile as "portable phones"
- AI as "smart search engines"

→ Before native workflows emerged

Productivity

"Using new tech like old tech"

Native Workflows

"Discovering true potential"

Original Productivity

The Valley
Time Since Technology Introduction
"Productivity dip during learning"

UX & Design

1. Onboarding / First-Run Experience

Right now someone opening the app for the first time has no idea where to start. A brief "what is this app" intro card or even just a one-time tooltip – would help. Even just "Start Danger Scale" with a visual cue.

2. The Gear Page is Hidden

PageGear exists but it's not in the navigation! It's buried and unreachable. It should either be added to the "More" menu or replace a less-used tab.

3. Loading States Feel Bare

When pages are fetching data, users just see nothing. A spinner loader (grey placeholder cards) would feel much better than a blank screen while data loads.

4. Pull-to-Refresh

Mobile users expect this. Right now there's no way to refresh data without reloading the whole page.

Content & Trust

5. Data Freshness Timestamps
